Hi Jasmine

I uploaded "1_qEELS_1deg_sum_revised.prz" in qEELS folder.
The data type is flot, so the image can be displayed properly in python.

Thank you.

Hi Jasmine

Just a small change.

Line 528 in qEELS_peak_detection_fitting_newest2.m
I changed 0.0019 to 0.0019687 in the equation.

I rewrote qEELS_peak_detection_fitting_newest2.m in the google drive.

Thank you.

Hi Jasmine

I changed "qEELS_peak_detection_fitting_newest2.m" again as follows.

Line 70 `Planck_constant=4.1356*10^(-15);`

Line 528 `dispersionQ = 0.0019687*abs(q_p)*10^(-9)*10^(6);`

I rewrote qEELS_peak_detection_fitting_newest2.m in the google drive.

Thank you.

Hi Jasmine

My supervisor said you can use Github for this project.

Thank you.

Hi Jasmine

For Nanomi

The range of C1, C2 and C3 : 6-300 (the same as the range in Matlab file)
The units for C1, C2, C3, Objective, Intermediate and Projective (except for Distance) of the scrollbars should be "mm".

For Alignment software

I want to keep all the csv files.
If binning.csv, move1.csv, move2.csv and magnification.csv can be combined into one file, it will be great.
marker_data.csv and tilt_angle.csv should be as it is.

Thank you.
